

Gauging definition understanding

1. Precise definition

- ▶ Is the precise definition **complete**?
- ▶ Can you see any **source of confusion** in how it is written?

Circle any issues and comment on them.

2. Personal interpretation

- ▶ Is the personal interpretation **well written** and **clear**?
- ▶ Is it **correct**?

Circle any issues and comment on them.

3. Example

- ▶ Is the given example a **correct** example?
- ▶ Is it a **representative** example?

In other words: Does the given example highlight the complexities involved in the definition? Does it help to clarify why the definition is needed?

Circle any issues and comment on them.

Question of the day

Is the absolute value function a linear function?
