#### **Course Notes**

#### Multivariable Calculus, Fall 2017

#### Queens College, Math 201

### Prof. Christopher Hanusa

http://qc.edu/~chanusa/courses/201/17/

### **Class Introductions**

Arrange yourselves into groups of four or five people, With people you **don't know**.

- ▶ Introduce yourself. (your name, where you're from, your major)
- What brought you to this class?
- ▶ Fill out the blank side of your notecard:
  - Write your name. (Stylize if you wish.)
  - Write some words about how I might remember you & your name.
  - Draw something (anything!) in the remaining space.
- Small talk suggestion: What kept you busy this summer?
- Exchange contact information. (phone / email / other)

### **Class Introductions**

Arrange yourselves into groups of four or five people, With people you **don't know**.

- ▶ Introduce yourself. (your name, where you're from, your major)
- What brought you to this class?
- ▶ Fill out the blank side of your notecard:
  - Write your name. (Stylize if you wish.)
  - Write some words about how I might remember you & your name.
  - Draw something (anything!) in the remaining space.
- Small talk suggestion: What kept you busy this summer?
- Exchange contact information. (phone / email / other)
- Discuss! What is Calculus?
  - Brainstorm! How do you convey Calculus to friends?
  - Organize into themes.

## **Class Introductions**

Arrange yourselves into groups of four or five people, With people you **don't know**.

- ▶ Introduce yourself. (your name, where you're from, your major)
- What brought you to this class?
- Fill out the blank side of your notecard:
  - Write your name. (Stylize if you wish.)
  - Write some words about how I might remember you & your name.
  - Draw something (anything!) in the remaining space.
- Small talk suggestion: What kept you busy this summer?
- Exchange contact information. (phone / email / other)
- ▶ Discuss! What is Calculus?
  - Brainstorm! How do you convey Calculus to friends?
  - Organize into themes.

How do these ideas translate to *multivariable* calculus?

#### Form good study groups !!!!!!!

- Discuss classwork and homework. Study for exams.
- Bounce around ideas, topics, questions.
- > You will depend on this group.

#### Form good study groups !!!!!!!

- Discuss classwork and homework. Study for exams.
- Bounce around ideas, topics, questions.
- ▶ You will depend on this group.

#### Put in the time.

- ▶ Four credits = (at least) twelve hours / week out of class.
- ▶ Homework stresses key concepts from class; learning takes time.

#### Form good study groups !!!!!!!

- Discuss classwork and homework. Study for exams.
- ▶ Bounce around ideas, topics, questions.
- ▶ You will depend on this group.

#### Put in the time.

- ▶ Four credits = (at least) twelve hours / week out of class.
- Homework stresses key concepts from class; learning takes time.

#### **Come to class prepared.**

- Review previous day's sections, notes.
- Do the homework & prepare to present.
- Preview the new day's sections. Download notes!

- ▶ I need to understand your concerns.

#### All homeworks posted online; first one (many parts) due Wednesday.

- **Daily:** Written / Presentation Homework.
  - ▶ A list of questions from the textbook to practice.
  - ▶ If a question is hard, you should practice **more** like it.

- **Daily:** Written / Presentation Homework.
  - ► A list of questions from the textbook to practice.
  - ▶ If a question is hard, you should practice **more** like it.
  - Presentations at beginning of the next class.
    - Write up solution in bullet-point format.
    - Present the solution to the class & answer questions.

  - First assignment due Wednesday September 6. (13 Qs)
  - \* Get started early! \*

Imagine a particle traveling along this curve.

Imagine a particle traveling along this curve. Is the curve a function?

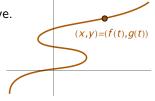

Imagine a particle traveling along this curve. Is the curve a function? (y = f(x)?)

Imagine a particle traveling along this curve. Is the curve a function? (y = f(x)?)

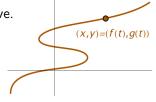

As an alternative, we can write the *x*-coordinate and the *y*-coordinate of the particle as a function of "time".

(Write 
$$x = f(t)$$
 and  $y = g(t)$ .)

Imagine a particle traveling along this curve. Is the curve a function? (y = f(x)?)

As an alternative, we can write the *x*-coordinate and the *y*-coordinate of the particle as a function of "time".

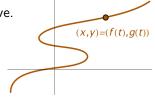

(Write 
$$x = f(t)$$
 and  $y = g(t)$ .)

This pair of functions is called the parametric equations of the curve.

Imagine a particle traveling along this curve. Is the curve a function? (y = f(x)?)

As an alternative, we can write the *x*-coordinate and the *y*-coordinate of the particle as a function of "time".

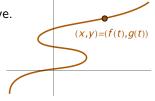

(Write 
$$x = f(t)$$
 and  $y = g(t)$ .)

This pair of functions is called the **parametric equations** of the curve.

And the variable *t* is called a **parameter**.

*Note:* The domain of t is often  $(-\infty, \infty)$  or an interval  $a \le t \le b$ .

- Goal 1: Understand parametric curves. (Today)
- Goal 2: Do calculus using parametric curves. (Next time)

What is the shape of a curve given by parametric equations?

- By hand
- Use a calculator or computer

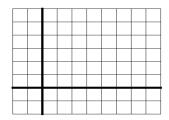

Example. Plot the curve defined by  $x(t) = t^2 - 2t$  and y(t) = t + 1.

What is the shape of a curve given by parametric equations?

- ▶ By hand  $\leftarrow$  How do you plot y = f(x)?
- Use a calculator or computer

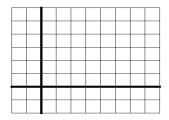

Example. Plot the curve defined by  $x(t) = t^2 - 2t$  and y(t) = t + 1.

What is the shape of a curve given by parametric equations?

- ▶ By hand  $\leftarrow$  How do you plot y = f(x)?
- Use a calculator or computer

Example. Plot the curve defined by  $x(t) = t^2 - 2t$  and y(t) = t + 1.

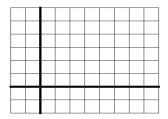

The shape of the curve is

What is the shape of a curve given by parametric equations?

- ▶ By hand  $\leftarrow$  How do you plot y = f(x)?
- Use a calculator or computer

Example. Plot the curve defined by  $x(t) = t^2 - 2t$  and y(t) = t + 1.

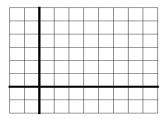

The shape of the curve is

Should we have known this?

What is the shape of a curve given by parametric equations?

- ▶ By hand  $\leftarrow$  How do you plot y = f(x)?
- Use a calculator or computer

Example. Plot the curve defined by  $x(t) = t^2 - 2t$  and y(t) = t + 1.

The shape of the curve is

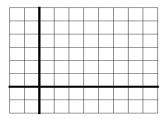

Should we have known this?

**Key concept:** Eliminate the parameter t to combine x = f(t) and y = g(t) into a "normal" function y = F(x) or x = F(y).

What is the shape of a curve given by parametric equations?

- ▶ By hand  $\leftarrow$  How do you plot y = f(x)?
- Use a calculator or computer

Example. Plot the curve defined by  $x(t) = t^2 - 2t$  and y(t) = t + 1.

The shape of the curve is

Should we have known this?

**Key concept:** Eliminate the parameter t to combine x = f(t) and y = g(t) into a "normal" function y = F(x) or x = F(y). Solve for t in second equation: t = y - 1 and plug in:  $x = (y - 1)^2 - 2(y - 1) = y^2 - 4y + 3$ , a "sideways parabola".

Example. Plot the curve defined by  $x = \cos t$ ,  $y = \sin t$ ,  $0 \le t \le 2\pi$ .

Example. Plot the curve defined by  $x = \cos t$ ,  $y = \sin t$ ,  $0 \le t \le 2\pi$ .

Plot points or solve directly.

 $y = \sin(\cos^{-1}x)$ 

Example. Plot the curve defined by  $x = \cos t$ ,  $y = \sin t$ ,  $0 \le t \le 2\pi$ .

Plot points or solve directly.

 $y = \sin(\cos^{-1} x)$  $y = \sqrt{1 - x^2}$ 

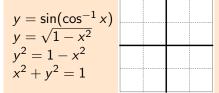

Example. Plot the curve defined by  $x = \cos t$ ,  $y = \sin t$ ,  $0 \le t \le 2\pi$ .

Plot points or solve directly.

 $y = \sin(\cos^{-1} x)$   $y = \sqrt{1 - x^2}$   $y^2 = 1 - x^2$  $x^2 + y^2 = 1$ 

Example. Plot the curve defined by  $x = \cos t$ ,  $y = \sin t$ ,  $0 \le t \le 2\pi$ .

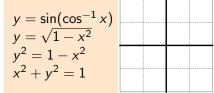

Plot points or solve directly.

A circle! But you knew that.  $\cos^2 t + \sin^2 t = 1$ 

Example. Plot the curve defined by  $x = \cos t$ ,  $y = \sin t$ ,  $0 \le t \le 2\pi$ .

Plot points or solve directly.

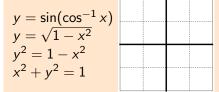

A circle! But you knew that.  $\cos^2 t + \sin^2 t = 1$ 

Starts at t = 0: (1, 0) and goes around counterclockwise.

Example. Plot the curve defined by  $x = \cos t$ ,  $y = \sin t$ ,  $0 \le t \le 2\pi$ .

Plot points or solve directly.

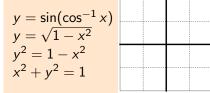

A circle! But you knew that.  $\cos^2 t + \sin^2 t = 1$ 

Starts at t = 0: (1,0) and goes around counterclockwise.

Example. Is this the same as  $x = \cos 2t$ ,  $y = \sin 2t$ ,  $0 \le t \le 2\pi$ ?

Example. Plot the curve defined by  $x = \cos t$ ,  $y = \sin t$ ,  $0 \le t \le 2\pi$ .

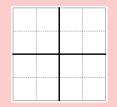

Plot points or solve directly.

A circle! But you knew that.  $\cos^2 t + \sin^2 t = 1$ 

Starts at t = 0: (1, 0) and goes around counterclockwise.

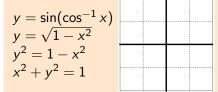

Example. Is this the same as  $x = \cos 2t$ ,  $y = \sin 2t$ ,  $0 \le t \le 2\pi$ ?

*Question:* What is  $x^2 + y^2$ ?

Example. Plot the curve defined by  $x = \cos t$ ,  $y = \sin t$ ,  $0 \le t \le 2\pi$ .

Plot points or solve directly.

A circle! But you knew that.  $\cos^2 t + \sin^2 t = 1$ 

Starts at t = 0: (1,0) and goes around counterclockwise.

Example. Is this the same as  $x = \cos 2t$ ,  $y = \sin 2t$ ,  $0 \le t \le 2\pi$ ?

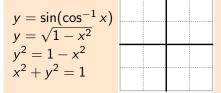

*Question:* What is  $x^2 + y^2$ ?

The figures traced out (the curves) are the same but the functions **are not** the same.

Example. Plot the curve defined by  $x = \cos t$ ,  $y = \sin t$ ,  $0 \le t \le 2\pi$ .

Plot points or solve directly.

A circle! But you knew that.  $\cos^2 t + \sin^2 t = 1$ 

Starts at t = 0: (1,0) and goes around counterclockwise.

Example. Is this the same as  $x = \cos 2t$ ,  $y = \sin 2t$ ,  $0 \le t \le 2\pi$ ?

*Question:* What is  $x^2 + y^2$ ?

The figures traced out (the curves) are the same but the functions **are not** the same.

You need to know your trig functions and values at certain points!!!!

## Circumnavigation

If we want to draw a circle at some other place

$$(x-h)^2 + (y-k)^2 = r^2$$

set  $x - h = r \cos t$  and  $y - k = r \sin t$ .

## Circumnavigation

If we want to draw a circle at some other place

$$(x-h)^2 + (y-k)^2 = r^2$$

set  $x - h = r \cos t$  and  $y - k = r \sin t$ .

In other words, use the parametric equations

$$x(t) = r \cos t + h$$
 and  $y(t) = r \sin t + k$ .

## Circumnavigation

If we want to draw a circle at some other place

$$(x-h)^2 + (y-k)^2 = r^2$$

set  $x - h = r \cos t$  and  $y - k = r \sin t$ .

In other words, use the parametric equations

 $x(t) = r \cos t + h$  and  $y(t) = r \sin t + k$ .

**Try it out!** Get out your graphing calculator TI-( $\leq 86$ ). Switch to Parametric mode: MODE  $\downarrow \downarrow \downarrow \downarrow$  PAR (Enter).

Set the domain of T to be from 0 to  $2\pi$ . WINDOW: Tmin = 0, Tmax =  $2\pi$ , Tstep =  $\pi/10$ .

Enter the equations  $X_1 = 3 \cos(T) + 2$  and  $Y_1 = 3 \sin(T) + 4$ .

This plots a circle of radius 3 centered at (2, 4).

#### Computers to the rescue

Calculators and computers can graph much more complicated curves.  $x_1(t) = t + 2\sin(2t)$  and  $y_1(t) = t + 2\cos(5t)$   $x_2(t) = 1.5\cos t - \cos 30t$  and  $y_2(t) = 1.5\sin t - \sin 30t$  $x_3(t) = \sin(t + \cos 100t)$  and  $y_3(t) = \cos(t + \sin 100t)$ 

#### Computers to the rescue

Calculators and computers can graph much more complicated curves.  $x_1(t) = t + 2\sin(2t)$  and  $y_1(t) = t + 2\cos(5t)$   $x_2(t) = 1.5\cos t - \cos 30t$  and  $y_2(t) = 1.5\sin t - \sin 30t$  $x_3(t) = \sin(t + \cos 100t)$  and  $y_3(t) = \cos(t + \sin 100t)$
