**Problem 1.** The *Hessian* matrix of a function  $f : \mathbb{R}^2 \to \mathbb{R}$  at a point  $p \in \mathbb{R}^2$  is defined to be

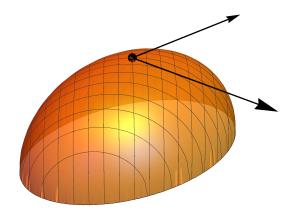

$$H_p = \begin{pmatrix} \frac{\partial^2 f(p)}{\partial x^2} & \frac{\partial^2 f(p)}{\partial y \partial x} \\ \frac{\partial^2 f(p)}{\partial x \partial y} & \frac{\partial^2 f(p)}{\partial y^2} \end{pmatrix}$$

You can think of the Hessian as a kind of second derivative of f since it's the derivative of the function  $\mathbb{R}^2 \to \mathbb{R}^2$  defined by  $p \mapsto \left(\frac{\partial f(p)}{\partial x}, \frac{\partial f(p)}{\partial y}\right)$ .

Define  $f : \mathbb{R}^2 \to \mathbb{R}$  by

$$f(x,y) = 6\sqrt{36 - 9(x - y + 1)^2 - 4(x + y - 3)^2}$$

There is one critical point  $p \in \mathbb{R}^2$  of f. Find the eigenvectors of the Hessian at that critical point and explain why they are orthogonal.

**Problem 2.** Find a  $3 \times 3$  matrix A with nonzero integer entries so that  $A^2 = I$ 

**Problem 3.** Describe all the different similarity classes of matrices that have the characteristic polynomial  $\chi(t) = t^5 - 2t^3 + t$ ? Which are invertible?

**Problem 4.** Consider the function  $f : \mathbb{R}^2 \to \mathbb{R}^2$  defined by f(x, y) = (u, v) where

$$u = \sin(x+y)$$
$$v = \exp(x-2y)$$

Notice that  $(0,0) \stackrel{f}{\mapsto} (0,1)$ . In a neighborhood of the point (x,y) = (0,0), the function f is invertible. That is, there exist an open set U containing (u, v) = (0, 1) and a function  $q: U \to V$ so that g(u, v) = (x, y).

Use the fact that f and g are inverses to compute the total derivative Dg implicitly at the point (u, v) = (0, 1).

Problem 5. Compute a determinant. Your choice:

$\begin{pmatrix} \cos(1) & \cos(6) & \cos(11) & \cos(16) & \cos(21) \\ \cos(2) & \cos(7) & \cos(12) & \cos(17) & \cos(22) \\ \cos(3) & \cos(8) & \cos(13) & \cos(18) & \cos(23) \\ \cos(4) & \cos(9) & \cos(14) & \cos(19) & \cos(24) \\ \cos(5) & \cos(10) & \cos(15) & \cos(20) & \cos(25) \end{pmatrix} \text{ or } \begin{pmatrix} 1 & 1 & 1 & 1 & 1 & 1 & 1 & 1 & 1 \\ 1 & \frac{1}{2} \\ 1 & \frac{1}{2} & \frac{1}{3} \\ 1 & \frac{1}{2} & \frac{1}{3} & \frac{1}{4} \\ 1 & \frac{1}{2} & \frac{1}{3} & \frac{1}{4} & \frac{1}{5} & \frac{1}{5} & \frac{1}{5} & \frac{1}{5} & \frac{1}{5} & \frac{1}{5} \\ 1 & \frac{1}{2} & \frac{1}{3} & \frac{1}{4} & \frac{1}{5} & \frac{1}{6} & \frac{1}{6} & \frac{1}{6} & \frac{1}{6} & \frac{1}{6} \\ 1 & \frac{1}{2} & \frac{1}{3} & \frac{1}{4} & \frac{1}{5} & \frac{1}{6} & \frac{1}{7} & \frac{1}{7} & \frac{1}{7} & \frac{1}{7} \\ 1 & \frac{1}{2} & \frac{1}{3} & \frac{1}{4} & \frac{1}{5} & \frac{1}{6} & \frac{1}{7} & \frac{1}{8} & \frac{1}{8} & \frac{1}{8} \\ 1 & \frac{1}{2} & \frac{1}{3} & \frac{1}{4} & \frac{1}{5} & \frac{1}{6} & \frac{1}{7} & \frac{1}{8} & \frac{1}{8} & \frac{1}{8} \\ 1 & \frac{1}{2} & \frac{1}{3} & \frac{1}{4} & \frac{1}{5} & \frac{1}{6} & \frac{1}{7} & \frac{1}{8} & \frac{1}{8} & \frac{1}{9} & \frac{1}{9} \\ 1 & \frac{1}{2} & \frac{1}{3} & \frac{1}{4} & \frac{1}{5} & \frac{1}{6} & \frac{1}{7} & \frac{1}{8} & \frac{1}{9} & \frac{1}{9} \\ 1 & \frac{1}{2} & \frac{1}{3} & \frac{1}{4} & \frac{1}{5} & \frac{1}{6} & \frac{1}{7} & \frac{1}{8} & \frac{1}{9} & \frac{1}{9} \\ 1 & \frac{1}{2} & \frac{1}{3} & \frac{1}{4} & \frac{1}{5} & \frac{1}{6} & \frac{1}{7} & \frac{1}{8} & \frac{1}{9} & \frac{1}{9} \\ 1 & \frac{1}{2} & \frac{1}{3} & \frac{1}{4} & \frac{1}{5} & \frac{1}{6} & \frac{1}{7} & \frac{1}{8} & \frac{1}{9} & \frac{1}{10} \\ \end{pmatrix}$	$ \begin{array}{ c c c c c c c c c c c c c c c c c c c$	2) or	$\begin{pmatrix} 1 \\ 1 \\ 1 \\ 1 \\ 1 \\ 1 \\ 1 \\ 1 \\ 1 \\ 1 $	$\frac{1}{12} \frac{1}{12} \frac$	$\frac{1}{12} \frac{1}{13} \frac{1}{13} \frac{1}{13} \frac{1}{13} \frac{1}{13} \frac{1}{13} \frac{1}{13} \frac{1}{13} \frac{1}{13} \frac{1}{13}$	$\frac{1}{12} \frac{1}{13} \frac{1}{14} \frac$	$\frac{1}{12} \frac{1}{13} \frac{1}{14} \frac{1}{15} \frac$	$\frac{1}{12} \frac{1}{13} \frac{1}{14} \frac{1}{15} \frac{1}{16} \frac$	$\frac{1}{5}$ $\frac{1}{6}$ $\frac{1}{7}$ $\frac{1}{7}$	$\frac{1}{5}$ $\frac{1}{6}$ $\frac{1}{7}$ $\frac{1}{8}$ $\frac{1}{8}$	$\frac{\frac{1}{6}}{\frac{1}{7}}$ $\frac{\frac{1}{8}}{\frac{1}{9}}$	$\frac{1}{5}$ $\frac{1}{6}$ $\frac{1}{7}$ $\frac{1}{8}$ $\frac{1}{9}$

## EXAM

Final Exam

Math 207: Fall 2014

December 23, 2014

• Do problem 1. Do two more (for an A) or one more (for a B).

Success!
