## Hamiltonian Cycles

Definition. A Hamiltonian cycle $C$ in a graph $G$ is a cycle containing every vertex of $G$.

## Hamiltonian Cycles

Definition. A Hamiltonian cycle $C$ in a graph $G$ is a cycle containing every vertex of $G$.

Definition. A Hamiltonian path $P$ in a graph $G$ is a path containing every vertex of $G$.

* Important: Paths and cycles do not use any vertex or edge twice.

## Hamiltonian Cycles

Definition. A Hamiltonian cycle $C$ in a graph $G$ is a cycle containing every vertex of $G$.

Definition. A Hamiltonian path $P$ in a graph $G$ is a path containing every vertex of $G$.
$\star$ Important: Paths and cycles do not use any vertex or edge twice.
Theorem: If $G$ has a Ham'n cycle, then $G$ has a Ham'n path. Proof:

## Hamiltonian Cycles

Definition. A Hamiltonian cycle $C$ in a graph $G$ is a cycle containing every vertex of $G$.

Definition. A Hamiltonian path $P$ in a graph $G$ is a path containing every vertex of $G$.

* Important: Paths and cycles do not use any vertex or edge twice.

Theorem: If $G$ has a Ham'n cycle, then $G$ has a Ham'n path. Proof:

An arbitrary graph may or may not contain a Hamiltonian cycle/path. This is very hard to determine in general!

## Hamiltonian Cycles

Theorem 2.3.5: A snark has no Hamiltonian cycle.

## Hamiltonian Cycles

Theorem 2.3.5: A snark has no Hamiltonian cycle.
Fact: A snark has an even number of vertices. Why?

## Hamiltonian Cycles

Theorem 2.3.5: A snark has no Hamiltonian cycle.
Fact: A snark has an even number of vertices. Why?
Proof: Suppose that $G$ is a snark that contains a Hamiltonian cycle $C$, visiting each vertex once.

When you remove C...

## Hamiltonian Cycles

Theorem 2.3.5: A snark has no Hamiltonian cycle.
Fact: A snark has an even number of vertices. Why?
Proof: Suppose that $G$ is a snark that contains a Hamiltonian cycle $C$, visiting each vertex once.

When you remove C...

Now color G strategically ...

## Hamiltonian Cycles

Theorem 2.3.5: A snark has no Hamiltonian cycle.
Fact: A snark has an even number of vertices. Why?
Proof: Suppose that $G$ is a snark that contains a Hamiltonian cycle $C$, visiting each vertex once.

When you remove C...

Now color $G$ strategically ...

Careful: The converse is not true!
There exist cubic graphs w/o Ham'n cycle and that are not snarks.
Example: Book Figure 2.3.4.

## Knight's Tours

In chess, a knight ( $)$ ) is a piece that moves in an " L ": two spaces over and one space to the side.

## Knight's Tours

In chess, a knight ( 0 ) is a piece that moves in an " L ": two spaces over and one space to the side.

Question. Is it possible for a knight to start on some square and, by a series of valid knight moves, visit each square on an $8 \times 8$ chessboard once?

## Knight's Tours

In chess, a knight ( 0 ) is a piece that moves in an " L ": two spaces over and one space to the side.

Question. Is it possible for a knight to start on some square and, by a series of valid knight moves, visit each square on an $8 \times 8$ chessboard once? (How about return to where it started?)

## Knight's Tours

In chess, a knight ( 0 ) is a piece that moves in an "L" : two spaces over and one space to the side.

Question. Is it possible for a knight to start on some square and, by a series of valid knight moves, visit each square on an $8 \times 8$ chessboard once? (How about return to where it started?)

Definition. A path of the first kind is called an open knight's tour. A cycle of the second kind is called a closed knight's tour.

## $8 \times 8$ Knight's Tour

## $8 \times 8$ Knight's Tour

Question. Are there any knight's tours on an $m \times n$ chessboard?

## The Graph Theory of Knight's Tours

For any board we can draw a corresponding knight move graph: Create a vertex for every square on the board and create edges between vertices that are a knight's move away.

An open/closed knight's tour on the board

## The Graph Theory of Knight's Tours

For any board we can draw a corresponding knight move graph:
Create a vertex for every square on the board and create edges between vertices that are a knight's move away.

An open/closed knight's $\qquad$ tour on the board

A knight move always alternates between white and black squares. Therefore, a knight move graph is always $\qquad$ .

## Knight's Tour Theorem

Theorem. An $m \times n$ chessboard with $m \leq n$ has a closed knight's tour unless one or more of these conditions holds:

1. $m$ and $n$ are both odd.
2. $m=1,2$, or 4 .
3. $m=3$ and $n=4,6$, or 8 .

## Knight's Tour Theorem

Theorem. An $m \times n$ chessboard with $m \leq n$ has a closed knight's tour unless one or more of these conditions holds:

1. $m$ and $n$ are both odd.
2. $m=1,2$, or 4 .
3. $m=3$ and $n=4,6$, or 8 .
"Proof" We will only show that it is impossible in these cases.
Case 1. When $m$ and $n$ are both odd,

## Knight's Tour Theorem

Theorem. An $m \times n$ chessboard with $m \leq n$ has a closed knight's tour unless one or more of these conditions holds:

1. $m$ and $n$ are both odd.
2. $m=1,2$, or 4 .
3. $m=3$ and $n=4,6$, or 8 .
"Proof" We will only show that it is impossible in these cases.
Case 1. When $m$ and $n$ are both odd,

Case 2. When $m=1$ or 2 , the knight move graph is not connected.

## Knight's Tour Theorem

Case 2. When $m=4$, draw the knight move graph $G$.

| 0 | 0 | 0 | $Q$ | 0 | 0 | 0 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| 0 | 0 | 0 | 0 | 0 | 0 | 0 |

Suppose there exists a Hamiltonian cycle $C$ in the graph $G$.

## Knight's Tour Theorem

Case 2. When $m=4$, draw the knight move graph $G$.

| 0 | 0 | 0 | $Q$ | 0 | 0 | 0 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| 0 | 0 | 0 | 0 | 0 | 0 | 0 |

Suppose there exists a Hamiltonian cycle $C$ in the graph $G$. Since $G$ is bipartite, $C$ must alternate between white and black vertices.

## Knight's Tour Theorem

Case 2. When $m=4$, draw the knight move graph $G$.

| 0 | 0 | 0 | $Q$ | 0 | 0 | 0 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| 0 | 0 | 0 | 0 | 0 | 0 | 0 |

Suppose there exists a Hamiltonian cycle $C$ in the graph $G$. Since $G$ is bipartite, $C$ must alternate between white and black vertices.

In addition, tint the outer rows of $G$ red and the inner rows blue. In $C$, every red vertex is only adjacent to blue vertices.

## Knight's Tour Theorem

Case 2. When $m=4$, draw the knight move graph $G$.

| 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| 0 | 0 | 0 | 0 | 0 | 0 | 0 |

Suppose there exists a Hamiltonian cycle $C$ in the graph $G$. Since $G$ is bipartite, $C$ must alternate between white and black vertices.

In addition, tint the outer rows of $G$ red and the inner rows blue. In C, every red vertex is only adjacent to blue vertices.

Since there are the same number of red and blue vertices, $C$ must also alternate between red and blue vertices.

## Knight's Tour Theorem

Case 2. When $m=4$, draw the knight move graph $G$.

| 0 | 0 | 0 | $R$ | 0 | 0 | 0 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| 0 | 0 | 0 | 0 | 0 | 0 | 0 |

Suppose there exists a Hamiltonian cycle $C$ in the graph $G$. Since $G$ is bipartite, $C$ must alternate between white and black vertices.

In addition, tint the outer rows of $G$ red and the inner rows blue. In C, every red vertex is only adjacent to blue vertices.

Since there are the same number of red and blue vertices, $C$ must also alternate between red and blue vertices.

Therefore: All vertices of $C$ are "white and red" or "black and blue".

## Knight's Tour Theorem

Case 3. $3 \times 4$ is covered by Case 2. Consider the $3 \times 6$ board:

Assume that there is a Hamiltonian cycle $C$ in $G$.

## Knight's Tour Theorem

Case 3. $3 \times 4$ is covered by Case 2. Consider the $3 \times 6$ board:

Assume that there is a Hamiltonian cycle $C$ in $G$.
$C$ visits every vertex $v$ and uses two of $v$ 's incident edges.
If $\operatorname{deg}_{G}(v)=2$, then both of $v$ 's incident edges in $G$ are in $C$.

## Knight's Tour Theorem

Case 3. $3 \times 4$ is covered by Case 2. Consider the $3 \times 6$ board:

Assume that there is a Hamiltonian cycle $C$ in $G$.
$C$ visits every vertex $v$ and uses two of $v$ 's incident edges.
If $\operatorname{deg}_{G}(v)=2$, then both of $v$ 's incident edges in $G$ are in $C$.
Draw all these "forced edges" that must be in $C$.

## Knight's Tour Theorem

Case 3. $3 \times 4$ is covered by Case 2. Consider the $3 \times 6$ board:

Assume that there is a Hamiltonian cycle $C$ in $G$.
$C$ visits every vertex $v$ and uses two of $v$ 's incident edges.
If $\operatorname{deg}_{G}(v)=2$, then both of $v$ 's incident edges in $G$ are in $C$.
Draw all these "forced edges" that must be in $C$.
The forced edges include four edges that form a cycle $C^{\prime}$.

## Knight's Tour Theorem

Case 3. $3 \times 4$ is covered by Case 2. Consider the $3 \times 6$ board:

Assume that there is a Hamiltonian cycle $C$ in $G$.
$C$ visits every vertex $v$ and uses two of $v$ 's incident edges.
If $\operatorname{deg}_{G}(v)=2$, then both of $v$ 's incident edges in $G$ are in $C$.
Draw all these "forced edges" that must be in $C$.
The forced edges include four edges that form a cycle $C^{\prime}$.
This cycle $C^{\prime}$ cannot be a subgraph of any Hamiltonian cycle! $\Rightarrow \Leftarrow$

## Knight's Tour Theorem

Case 3. $3 \times 4$ is covered by Case 2. Consider the $3 \times 6$ board:

Assume that there is a Hamiltonian cycle $C$ in $G$.
$C$ visits every vertex $v$ and uses two of $v$ 's incident edges.
If $\operatorname{deg}_{G}(v)=2$, then both of $v$ 's incident edges in $G$ are in $C$.
Draw all these "forced edges" that must be in $C$.
The forced edges include four edges that form a cycle $C^{\prime}$.
This cycle $C^{\prime}$ cannot be a subgraph of any Hamiltonian cycle! $\Rightarrow \Leftarrow$
The $3 \times 8$ case is similar, and for you to explore.
